## XII. Head MRI Measurements

MRI was performed on a 3.0T SIEMENS instrument (MAGNETOM Trio, A Tim System).

### [1\) Periventricular hyperintensity](#)

Divide into 4 classes according to Appendix 1.

### [2\) Ventricular dilatation](#)

Divided into 4 classes according to Appendix 2.

### [3\) Brain atrophy](#)

Divided into 4 classes according to Appendix 3.

### [4\) Cerebrovascular disease](#)

Cerebral infarction

Decided as following,

Lacuna infarction : The lesions of white matter, basal ganglia, thalamus, internal capsule, midbrain, pons, medulla oblongata and whose size are larger than or equal to 3mm and smaller than or equal to 15mm.

Cerebral embolism : Include cerebral or cerebellar cortex, and which is not border zone infarction.

Cerebral thrombosis : Other than above.

Cerebral infarction was defined as all of lacuna infarction, embolism and thrombosis.

Cerebral hemorrhage

On T2 weighted image(WI), hyperintensity inside the lesion and no signal around the lesion. Or on T2WI no signal slit lesion.

Cerebrovascular diseases

Cerebrovascular diseases were defined as all of cerebral infarction and cerebral hemorrhage.

### **Appendix 1: Periventricular hyperintensity**

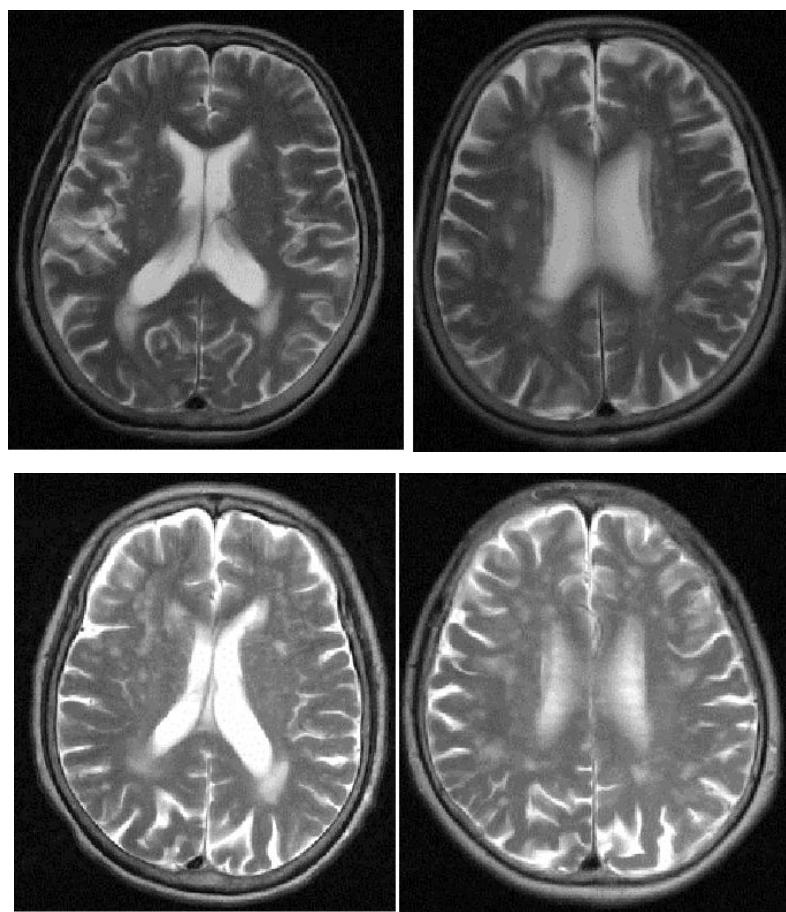

I. None: None or minimal periventricular signal hyperintensities in the form of caps only in the anterior horn of lateral ventricles.

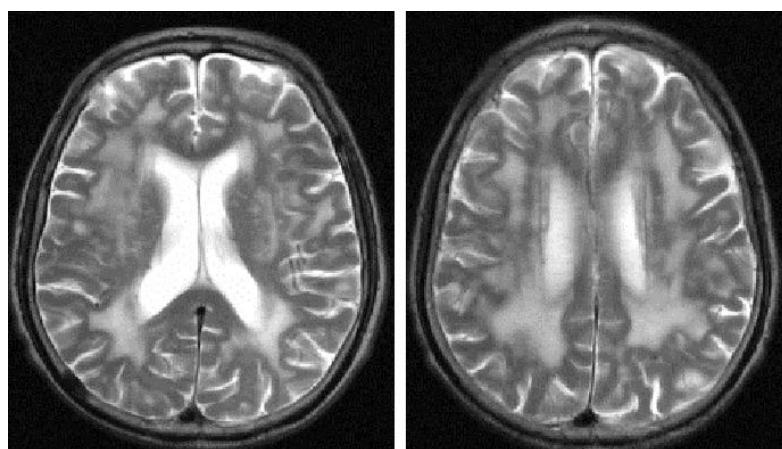

II. Mild: Caps in both anterior and posterior horns of lateral ventricles.

III. Moderate: Multifocal periventricular hyperintense punctuate lesions.

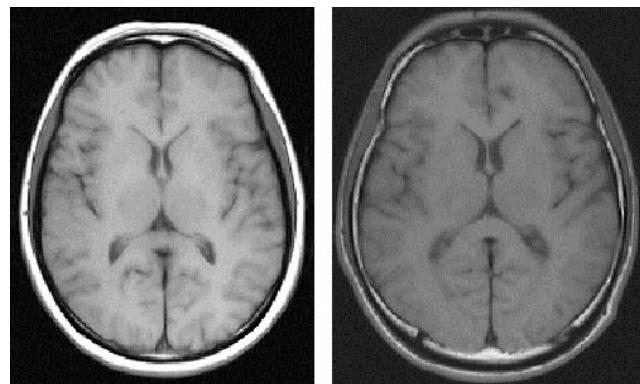

IV. Severe: Multiple high signal intensity area that reached confluence in the periventricular region and white matter.

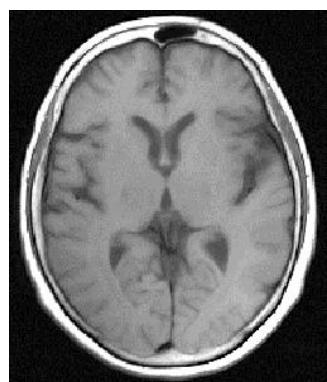

## **Appendix 2: Ventricular dilatation**

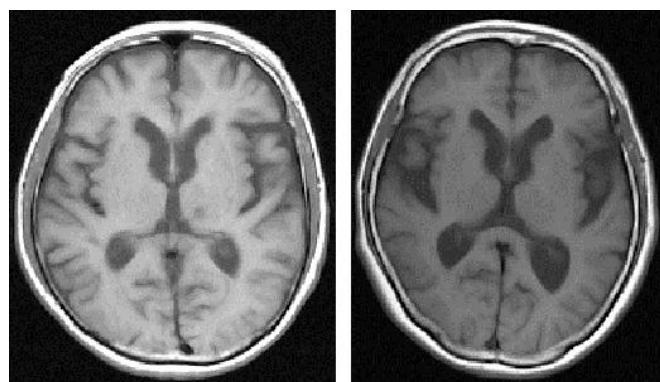

I. None

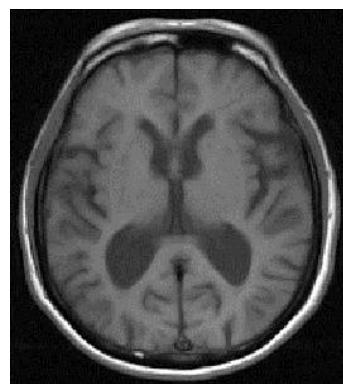

II. Mild

III. Moderate

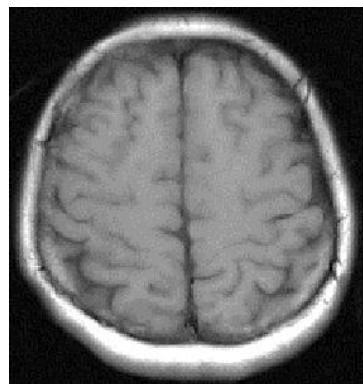

IV. Severe

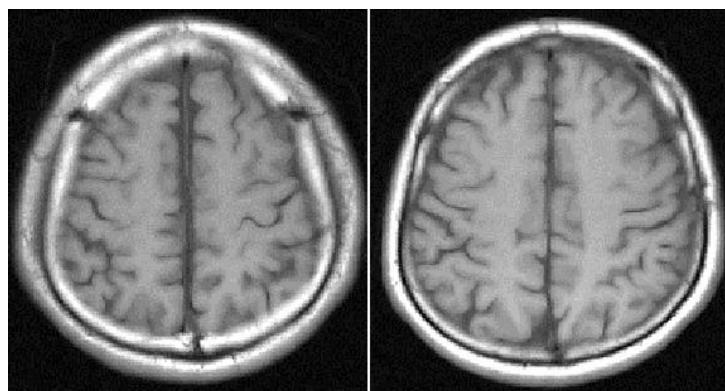

## Appendix 3: Brain atrophy

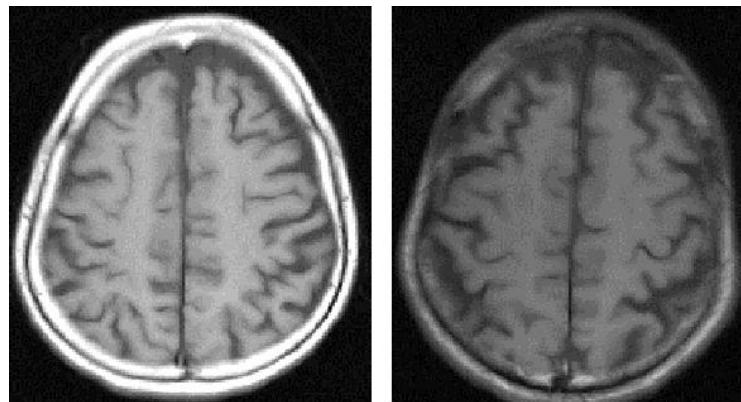

I. None

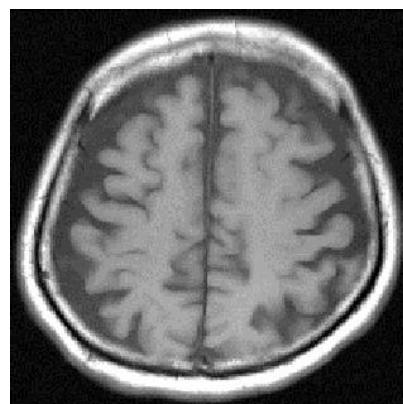

II. Mild

III. Moderate

IV. Severe
